

PAINTING A NEW WORLD  
PEINDRE UN NOUVEAU MONDE

## REPORT ON MURAL PAINTED IN NDUGAMANO COMMUNITY RESOURCE CENTRE FUNDED BY PAINTING A NEW WORLD.

The mural was done through a generous donation from Painting a new world under the **Community Empowerment through Art Programme**.

The programme aims to transform artists and their communities through Art

The mural was painted in inside our community resource centre which is now operational .It is targeting community members who come to the centre for training in climate change, environment and agriculture related topics.

It depicts two communities, one on the right and the other on the left. The one on the right is practicing good environmental management practices eg. Tree planting and renewable energy technologies. As a result, they live productive lives in harmony with the environment.

The one on the left is characterized by forest degradation and poor environmental practices. As a result, they are suffering .Their rivers are dry, there is famine and death. They are in conflict with the environment.

***Benefits of Environmental conservation***

***Disadvantages of environmental degradation***

The Mural has been viewed by over 600 community members who have visited the resource centre in 2019 and used to train seven community groups on different occasions.

We look forward to painting more murals to be displayed in the centre for educating the general public on various social issues.

Kiangure Springs Environment initiative is grateful for the continued support from **PNWM** in our **Community through Art Programme**.

**The Resource centre when fully completed will houses an art studio and gallery where we plan to train more artists and create art Space for them to develop and market their art through exhibitions.**

**Report prepared by Joram Mathenge**
